

# **Advanced Database Management System**

## **Mid-Term Project**

**Section: B**

**Group Name: The Noobs**

## **Clinic Management System**

GROUP MEMBERS	
Name	ID
ANIK DAS	18-38080-2
SABBIR HOSSAIN	18-39103-3

**AMERICAN INTERNATIONAL UNIVERSITY OF BANGLADESH**

## **Table of content:**

1. Overview and project objectives.
  - Clinic Management System.
  - To develop a basic database of clinic management system
2. ERD diagram
  - Design of an ERD diagram.
3. Name of the tables
  - Admin
  - Doctor
  - Receptionist
  - Patient
  - Appointment
  - Treatment
4. Table Creation
5. Insertion of data
  - Inserting a minimum of 5 rows in a table.
6. Query Writing
  - Making at least 10 SQL queries.
7. Summery
  - What lessons we learned, outcomes and future plans and thought.

## **System summary:**

Our system is about a clinic management system where there will be a maximum of three to five admins who will manage the doctors and receptionists. In this system, the patients will take appointments for some particular doctors and the receptionists will make appointments for the patients. Besides, the doctors will give treatment to the patients. So, it is necessary to store all the information about this system for future use. For this reason, we need to connect the database with the system so that we can store the admin list, doctor list, receptionist list, patient list. Besides, the system will also store the appointment list and the treatment details.

In this system, one admin can manage many doctors as well as receptionists. Again, one doctor can give many appointments and treatments to many patients. Also, a receptionist can make many appointments. However, all the entities of the system relate to one-to-many relationship.

## Query Writing:

1. Find doctor username and id who are being managed by admin='rezwan'

```
select doctor.username,doctor.adminid from admin,doctor where admin.adminid=doctor.adminid and adminname='Rezwan Ahmed'
```

Results Explain Describe Saved SQL History

USERNAME	ADMINID
tanvir201	101
imtiaaz205	101

2 rows returned in 0.00 seconds [Download](#)

2. Find patient who get treatment from Dr. Tanvir Islam

```
select * from patient where patientid=(select patientid from treatment where doctorid=(select doctorid from doctor where doctorname='Dr. Tanvir Islam'))
```

Results Explain Describe Saved SQL History

PATIENTID	PATIENTNAME	USERNAME	PASSWORD	GENDER	AGE	HEIGHT	WEIGHT	BLOODGROUP	DISEASE
401	Faruk Hossain	faruk401	faruk401	Male	37	167	73	AB+	Diabetes

1 rows returned in 0.00 seconds [Download](#)

3. Find the treatment of a patient who is suffering from anemia.

```
select prescription from treatment where patientid=(select patientid from patient where disease='Anemia')
```

Results Explain Describe Saved SQL History

PRESCRIPTION

Iron-Tablet

1 rows returned in 0.00 seconds [Download](#)

4. Find the patients who got an appointment from the doctor who is from the medicine department.

```
select * from patient where patientid in(select patientid from appointment where doctorid=(select doctorid from doctor where department='Medicine'))
```

Results Explain Describe Saved SQL History

PATIENTID	PATIENTNAME	USERNAME	PASSWORD	GENDER	AGE	HEIGHT	WEIGHT	BLOODGROUP	DISEASE
404	Rabeya Khatun	rabeya404	rabeya404	Female	34	157	71	O-	Anemia
402	Iqbal Hossain	iqbal402	iqbal402	Male	42	176	85	AB-	Cancer
401	Faruk Hossain	faruk401	faruk401	Male	37	167	73	AB+	Diabetes

3 rows returned in 0.01 seconds [Download](#)

5. Find the doctor with the maximum number of appointments.

```
select doctorid,count(*) from appointment group by doctorid having count(*)=(select max(count(*)) from appointment group by doctorid)
```

Results Explain Describe Saved SQL History

DOCTORID	COUNT(*)
201	3

1 rows returned in 0.00 seconds [Download](#)

6. Find out the patient who takes appointment of a doctor with minimum appointment fee.

```
select * from patient where patientid=(select patientid from appointment where doctorid=(select doctorid from doctor where appointmentfee=(select min(appointmentfee) from doctor)))
```

Results Explain Describe Saved SQL History

PATIENTID	PATIENTNAME	USERNAME	PASSWORD	GENDER	AGE	HEIGHT	WEIGHT	BLOODGROUP	DISEASE
404	Rabeya Khatun	rabeya404	rabeya404	Female	34	157	71	O-	Anemia

1 rows returned in 0.00 seconds [Download](#)

7. Find the details of the receptionist who makes the highest number of appointments.

```
select * from receptionist where receptionistid in(select receptionistid from appointment group by  
receptionistid having count(*)=(select max(count(*)) from appointment group by receptionistid))
```

Results Explain Describe Saved SQL History

RECEPTIONISTID	RECEPTIONISTNAME	USERNAME	PASSWORD	EMAIL	GENDER	AGE	ADMINID
303	Sajid Al Shakib	sajid303	sajid303	sajid303@gmail.com	Male	25	103
305	Jubayer Islam	jubayer305	jubayer305	jubayer305@gmail.com	Male	24	101

2 rows returned in 0.00 seconds [Download](#)

8. Write a pl/sql code to find the username and password of an admin from admin database whose id is input by the user.

```
declare  
  
    id admin.adminid%type := :Input_Admin_Id;  
    uname admin.username%type;  
    pass admin.password%type;  
  
begin  
    select username,password into uname,pass from admin where adminid=id;  
    dbms_output.put_line('Username: '|| uname);  
    dbms_output.put_line('Password: '|| pass);  
  
end;
```

Results Explain Describe Saved SQL History

Username: rezwan101  
Password: rezwan101

Statement processed.

0.00 seconds

9. Write a pl/sql code to find the appointment list of the doctor whose id is input by the user.

```
declare
  docId appointment.doctorid%type := :Input_Doctor_Id;
  serial appointment.appointmentserial%type;
  recId appointment.receptionistid%type;
  patId appointment.patientid%type;
  appdate appointment.appointmentdate%type;
begin
  select doctorid,appointmentserial,appointmentdate,patientid,receptionistid into docId,serial,appdate,patId,recId from appointment where
  doctorid=docId;
  dbms_output.put_line('Appointment Serial: '|| serial);
  dbms_output.put_line('Appointment Date : '|| appdate);
  dbms_output.put_line('Doctor ID      : '|| docId);
  dbms_output.put_line('Patient ID     : '|| patId);
  dbms_output.put_line('Receptionist ID : '|| recId);
end;
```

Results Explain Describe Saved SQL History

Appointment Serial: 502  
Appointment Date : 25.03.2022  
Doctor ID : 202  
Patient ID : 402  
Receptionist ID : 302

Statement processed.

10. Write a pl/sql code to a patient who took treatment from a doctor whose id is input by user.

```
declare
  docId doctor.doctorid%type := :id;
  patname patient.patientname%type;
  Patgen patient.gender%type;
  patdisease patient.disease%type;
begin
  select patientname,gender,disease into patname,patgen,patdisease from patient where patientid=(select patientid
  from treatment where doctorid=(select doctorid from doctor where doctorid=docId));

  dbms_output.put_line('Patient Name : '|| patname);
  dbms_output.put_line('Gender      : '|| patgen);
  dbms_output.put_line('Disease     : '|| patdisease);
end;
```

Results Explain Describe Saved SQL History

Patient Name : Iqbal Hossain  
Gender : Male  
Disease : Cancer
